DETAILED ACTION

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Saville, A

Telecommunications Industry White Paper.

The reference teaches a method of billing, the method comprising:

in a billing system for a communication network, generating account information related to provisioning a communication service from a third party network for a customer;

receiving network information from the communication network into the billing system;

in the billing system, processing the network information to determine network charges related to usage of the communication network by the customer;

receiving third party information from the third party network into the billing system; in the billing system, processing the third party information to identify the account information and determine third party charges related to usage of the third party network by the customer;

in the billing system, calculating a single invoice for the customer that includes the network charges and third party charges; and

in the billing system, generating the single invoice.

wherein the account information is an account record for the communication service.

wherein the network charge is an equipment charge.

(See underlined sections of Article)

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims rejected under 35 U.S.C. 103(a) as being unpatentable over Saville.

Art Unit: 3693

The reference fails to expressly teach the following:

the method of claim 1 wherein calculating the single invoice is based on a customer profile and further comprises identifying the customer profile for the customer.

the method of claim 1 wherein calculating the single invoice further comprises calculating a discount.

the method of claim 1 wherein calculating the single invoice comprises calculating taxes.

generating and transmitting an order record to the third party network; and receiving and processing a response to the order record from the third party network.

It would have been obvious for each of these limitations to be included in the consolidated bill as motivated by the art recognized results associated with each.
